

Protection for your cabling .....

## Cablelay™

Cablelay Matting conforms to EN13501-1.

Fire Class – B.

Smoke Production – s3.

Burning Droplets – d0.

Official test documents are supported by the material manufacturer and their partners.

1. The introduction of the Euroclass fire classification to EN 13501-1 now means a product sold in each nation has been tested to the same standard. The classification system gives a rating for the European Fire Classification from A1, A2, B, C, D, E and F. For a while Building Regulation accepted both national classes and the new Euroclass fire performance. The latest updates to Building Regulations have seen the removal of the national classes and full adoption of the Euroclasses. Consultant specifications are starting to request the Euroclass B rather than the Class O or national classes.
2. The national Fire Performance classes were:
  - UK – BS476 Part 7 Class 1 & BS476 Part 6 Class O.
  - Germany – B1 (DIN 4102).
  - France – MI-NF.
  - Scandinavia – PII NT036.
  - Czech – Brandkenniziffer 5-2.
  - Austria – B1 ONORM B38000.
3. The European Fire Classification test EN13501-1 for Burning Droplets is d0, will not drip.
4. Reaction to fire, Self-extinguishing.
